This attractively-produced, thin pocket-size paperback deals with part of the mining history in the region just north of Ottawa, during the period 1800-1875. The Forsyth, Baldwin and Haycock iron deposits are emphasized; illustrations include old photographs, drawings and excerpts from field notes, as well as recent maps and photos. The account is well-written and referenced; it is unfortunate that its scope is not greater. It should be read by those, amateur and professional alike, with interests in the history, resources or mineralogy of the Capital region.

MS received December 2, 1975.
