## EM 3002 - Dynamically focused multibeam echo sounder

### Highlights:

- Dynamically focused beams
- Up to 254 soundings for the single head system, 508 soundings for the dual head.
- Fully stabilized for pitch and roll
- Equidistant or equiangular beamspacing over the swath
- All beams maintained for all depths
- Applications:
  - Coastal engineering inspection and monitoring
  - Environmental seabed and habitat mapping
  - Acoustic backscatter imaging of the seabed
  - Seabed sediment classification
  - Mapping of biomass in the water column

Compiles with IHO-44 special order.

### Instructions for Contributors

The International Hydrographic Review is an international journal published three times a year by GITC bv. It is sponsored by the International Hydrographic Organisation. It contains original papers concerning all aspects of hydrography and associated subjects. All articles are subjected to peer review and are expected to be 4,000 to 6,000 words long, although longer articles may be considered. It also provides a medium for discussions in the form of shorter Notes, that are typically 1,500 to 2,000 words in length.

Information on the layout of articles and the form of illustrations and references may be obtained by requesting 'Instructions to Authors' from the Editor. They are also published in the first issue of each year. Submissions should be send to:
