

ERRATA

TO "HYDROGRAPHIC REVIEW", VOLUME VII, N° 1 (MAY 1930).

PAGE 36 :

In the article entitled *Notes on Practical Hydrography (Use of the LAMBERT conformal conical projection for the plotting of Hydrographic Surveys)*, published in the "Hydrographic Review" of May 1930, I wrote on page 36 :

"On the other hand it should be noted that, in an article published by A. WEDEMEYER in the "Annalen der Hydrographie" of March-April 1919, page 49 et seq. which deals precisely with the question of the choice of the working projection for the plotting of coastal surveys and in which the problem is minutely studied and comparisons drawn between the different types of conformal and non-conformal projections, the LAMBERT projection is not even mentioned."

In a letter dated 31st. October 1930, Professor Doctor A. WEDEMEYER remarked as follows :

"It seems that in the "Hydrographic Review" of May 1930, page 36, an error on your part has arisen. The LAMBERT conformal conical projection was mentioned by me in the "Annalen der Hydrographie" 1919, page 51 : "the Government of Meklenberg uses the conformal conical projection" (Die Mecklenburgische Regierung bedient sich des winkeltreuen Kegelentwurfs)."

I admit and regret this inaccuracy. Consequently the last part of the sentence quoted above must be corrected to read as follows :

"...the LAMBERT projection is just mentioned but not studied".

L. TONTA.
